About Alopecia Drugs

Alopecia is a loss of hair and can occur at any age across the genders. The exact cause of this disorder is unknown, but many factors are assumed to be responsible for developing alopecia. Few of the primary ones are a sedentary lifestyle, unhealthy diets, and side effects of certain medical treatments. Moreover, hormonal imbalance and aging increase the probability of developing a chronic disease like cancer, arthritis, depression, and hypertension, which would also lead to hair loss, especially among middle-to-late-aged people.

Technavio's analysts forecast the global alopecia drugs market to grow at a CAGR of 5.02% during the period 2016-2020.
