

Best customer experience with Tryvium Desk

Heavy competition and newer customer-targeted technologies have forced companies to stay always a step ahead in retaining the existing and attracting the potential customers. Amid the market-oriented and product-oriented marketing strategy, customer experience is more about the service-oriented aspect of a business.

Several ITSM ticketing tools have been developed to track, store, and address the issues faced by the customer. By integrating ITSM tools with skype for business messaging tool it helps maximize your business collaboration with the customer. Tryvium desk exactly does that, It displays on parallel the Skype for Business window along with the service desks and the CRM tools. Without even toggling to Service desk/CRM, the ticket raising is done easily by the agent.

Good customer experience is satisfactorily provided when the customer has the overall appreciation of the product or service.
